

Badge & Track Software

Simple, powerful and comprehensive

Issuing badges, booking events, validating and tracking delegates.

Whether a simple record of attendance or a sophisticated validation program is required, Badge & Track facilitates the generation of a unique identifier onto a personalised pass to identify an individual pass holder at an event and thereby track their attendance.

Badge & Track Features	with ComPic	with CCC
Event set up	✓	✓
Event booking	✓	✓
Event validation (with suitable hardware)	✓	✓
Unlimited number of badge designs	✓	✓

Production of personalised badges with photo	✓	
Use with visible barcode solutions	✓	✓
Use with IR (infra red) barcode solutions (with suitable hardware)	✓	✓
Use with PVC/Smart Cards/Prox cards	✓	
Batch printing	✓	✓
Single badge printing	✓	✓
Recording of Photo images	✓	
Image retrieval	✓	
Event activity reporting	✓	✓
Link of activity data to email merge	✓	✓
Full database configuration	✓	✓
Register of attendance at event	✓	✓
Register of attendance at sessions within an event	✓	✓
Each scan date stamped, event recorded, in/out	✓	✓
Tethered readers	✓	✓
'Untethered' off-line readers	✓	✓
Wireless communication (with suitable hardware)	✓	✓
Facility to set up multiple projects/events	✓	✓
...a custom requirement? – please ask	✓	✓

By representing data unique to an individual on a badge in the form of a barcode or encoded number, scanning that badge records attendance at an event, entry into a specific seminar or retrieval of their photo to a screen on entry – depending on what is required. All the scanned data is available for creation of reports as soon as it is downloaded from the badge readers.

Badge & Track operates with either ComPic or Conference Card Creator software to provide a comprehensive solution.

Badge & Track features in more detail:

- *Event set up:* define up to 18 events which can relate to separate events, rooms, doors or sessions etc, as required. Each new project allows a further 18 events to be created. With the Memowand reader, the user can switch between events and be set for in/out scans. With the IDScan unit only one event can be handled by a single unit between each download.
- *Event booking:* pre-enter booking details for individuals or use "event triggers" to automatically register individuals for a particular event according to agreed data criteria.
- *Event activity recording:* the badge carries a unique barcode or other identifier which is read at point of entry and the collected data downloaded to allow user configurable attendance reports to be produced immediately.
- *Event validation:* (with appropriate hardware) allows upload of a validation file to the reader, containing relevant booking information for off-line verification of access rights for each attendee. All the recommended readers can be used to record general event attendance; however, if validation is required to control entrance to an event then the Memowand pen should be used.
- *Event activity report:* configurable report with filter to report on relevant groups, scans in/out, etc
- *Unscanned report:* to highlight 'no shows'.
- *Email merge:* link of reports to email templates to allow immediate contact with attendees/non-attendees before, during or after the event.
