Computer Photo ID Cards

Browser front end
for adding, searching
and validating records

- Client server architecture
- Interface to 3rd party software
 - Customisable to bespoke requirements
 - Launched in 1986

Computer Photo ID Cards

ComPic is accessible by a browser which is also suitable for interface to all types of ID card software.

Browser functionality

- Manage data via intranet or internet
- Google style search on cards – optimised for speed
- Customisable “look & feel” using CSS (Cascading Style Sheets)
- Dynamic forms will connect to existing ID Card software (ComPic and others) without the need to write html code

ComPic

- All software written in house (since 1986) under ISO 9001/2000
- Fully compatible with SQL server
- Archiving to client specification
- Duplicate entry checking
- Location link – can restrict functionality based on user location
- Batch image import and automatic cropping

- Auto CSV import; details saved and can be run repeatedly
- Advanced field configuration
- Automatic database fill
- Live overlay to 3rd party databases
- Offline printing – cards held for printing if printer not functioning
- Mail merge facility
- Offline data entry – if server down data is stored, locally, and added later to server
