Dye Sublimation – exact colour Pantone matching

## Dye sublimation

**Widths:** 10, 16, 19, 25mm

**Length:** @ 90cm

**Lead times:** 4-6 weeks

The lace used is always white, thus having a solid colour printed will enable the combination of blue and white (for example) being quoted as ONE colour printing.

The process involves a 'paper ribbon' being created. The paper ribbon is printed with exact colour matching inks, Pantone references. Once the paper ribbons have been produced the white lace and paper ribbons are brought together on a heat transfer machine. The ink on the paper ribbon is heat transferred onto lace - this process is referred to as dye sublimation. Effectively the inks are 'sublimated' into the lace and hence as well as being accurate Pantone matches, the dye sublimated inks are very hard wearing.

*Excellent colour Pantone matching and fine detailed print.*

Colour visual - prior to production

FlyJet

Colour way 1

Blue 072c  
Orange 021c
