

ComPic V6

Standard Software Components

Available as a standalone product or optimised to run on a network with a server based database, such as SQL Server, the standard ComPic v6 configuration provides a comprehensive photo ID card issue and management system. This can be enhanced by the addition of optional features and may also be linked with other products from the IDentilam suite of idcardsonline software solutions: *Badge & Track* for recording attendance and/or authentication of card holders, *Card Check* for image retrieval, and *ComPicWeb*, a browser front end for data access and custom workflow.

Database

- 20 user configurable database fields
- Next button: automatic data entry for next record
- Database search and browse facility
- Validation on defined fields
- Fields can be set as mandatory, read only
- ODBC compliant
